JUMO safetyM TB/TW 08

Temperature limiter, monitor

as per DIN EN 14 597

In the panel-mounting case to be fitted in the panel cut-out

Brief description

The JUMO safetyM TB/TW 08 is a freely programmable temperature limitation device. The measuring input is freely programmable for RTD temperature probes, thermocouples as well as current and voltage signals.

TB/TWs are used to monitor thermal processes in the system for a set limit value. If this value is exceeded, the installed relay (with fuse cut-out) switches the system to an operational safe status, the green OK LED extinguishes and the red K1 LED is lit. If the system reaches the "Good" range again, the Reset key must be pressed for the TB. However, the TW automatically resets without external influence.

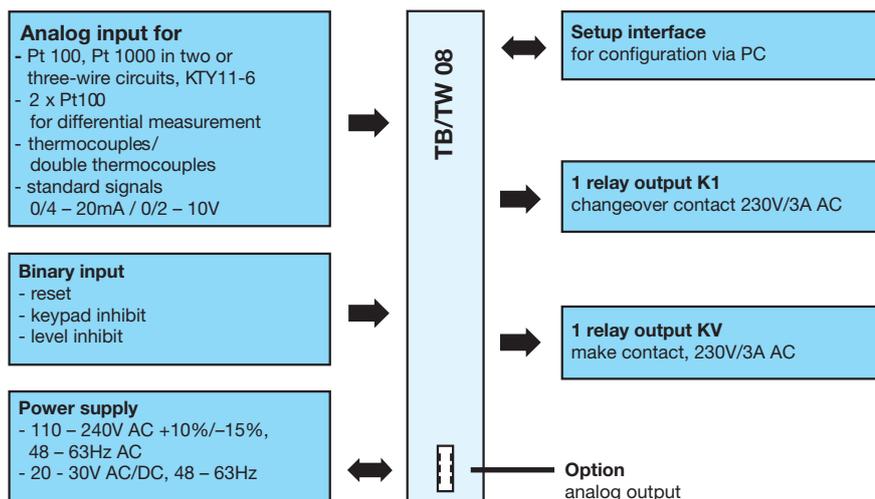

For an adjustable temperature, the KV relay can put out a pre-alarm prior to reaching the limit value, the switching behavior of which is additionally indicated by the KV LED. The TB/TW 08 are designed for panel-mounting and are wired via plug-type screw-in terminals with a cable cross section of max. 2.5 mm².

A PC setup program is available as accessories, which can be used to set and save the probe type, measuring range, output behavior and lockings.

Type 701170/ ...

Block diagram

Special features

- Setup program for configuration and archiving via PC
- Digital input filter with adjustable filter time constant
- Pre-alarm absolute or adjustable as distance to the limit value
- Large voltage supply range of AC 110 ... 240V +10% /-15%
- Configurable as TB or TW
- 17 linearizations can be set
- Internal and external unlocking possible
- Input 2x Pt100 for differential value calculation
- Protection class on the front IP 65
